LAB ASSIGNMENT V : HUERISTIC EVALUATION

SYSTEM EVALUATED : SNAPDEAL HIGH FIDELITY DESIGN

Group members NAME : Mohammad Daniyal , Afraz Kamal , Vidhu Preman

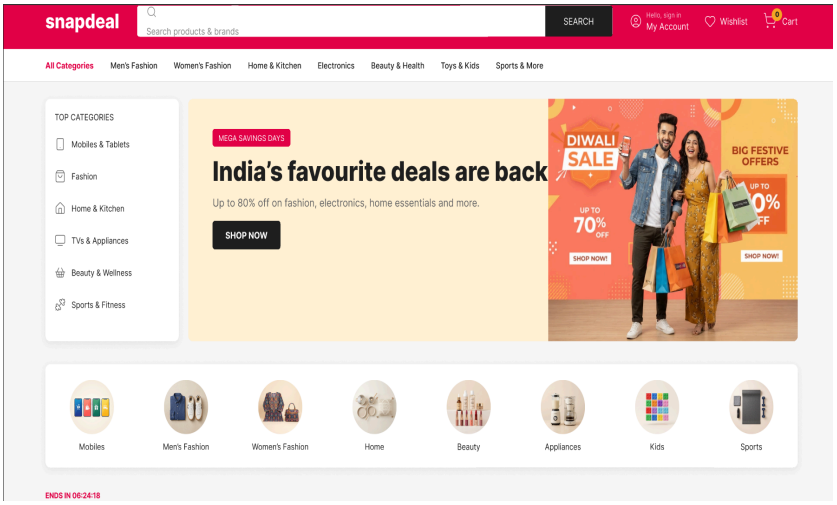

****Evaluation to be done by other Group**

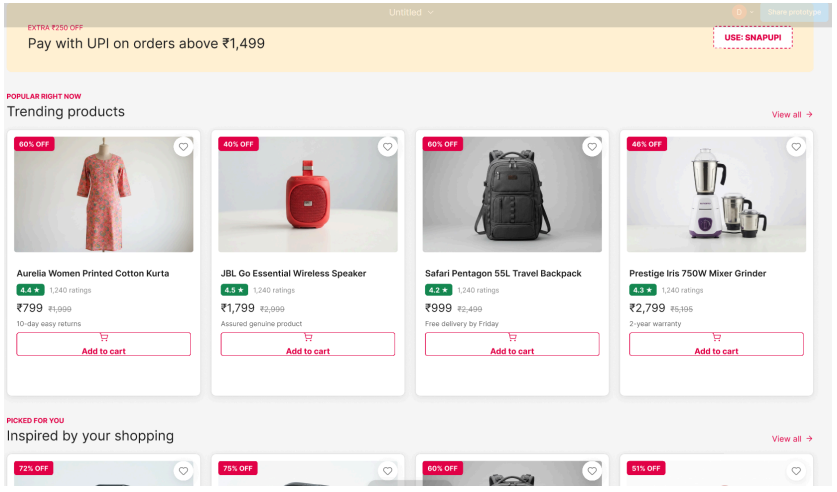

PART I : HUERISTIC EVALUATION BASED ON NIELSEN'S 10 GENERAL PRINCIPLES FOR INTERACTION DESIGN. (0 is lowest and 5 is highest)

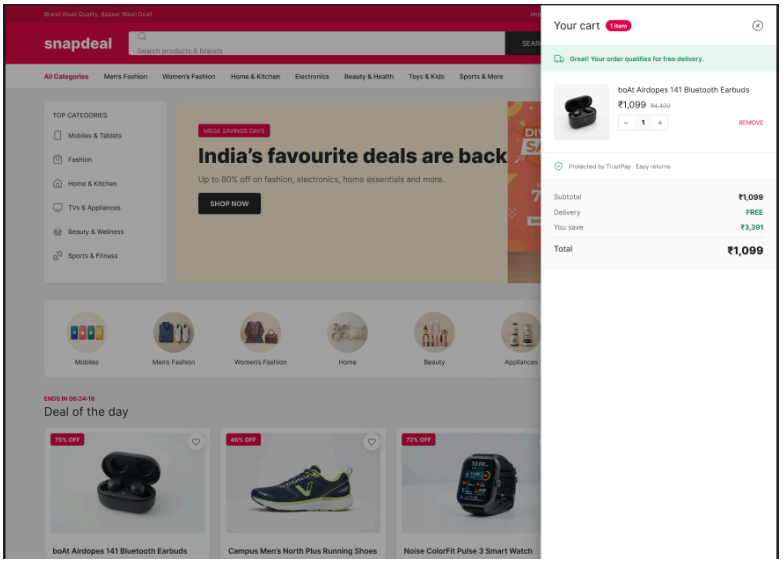

S.No.	Heuristic Evaluation Parameter	Mention Violation if any	Severity 0-10 (0- minimum and 10 is maximium)	Ways to improve
1	User Control: Interface will allow the user to perceive that they are in control	Hard to edit address or item quantity easily during checkout.	4	Add simple edit buttons on the order summary page.
2	Human Limitations: Interface will not overload the users cognitive, auditory and motor skills	Comparing seller listings and reviews can get confusing.	5	Highlight top seller badges and clean up review cards.
3	Accommodation: The interface will fit the way each user group works and thinks (personas)		0	Looks good.
4	Linguistic Clarity: Interface will communicate as efficiently as possible		0	Labels are clear.
5	Aesthetic Integrity :The interface will have an attractive and appropriate design		0	Homepage redesign is clean and modern.
6	Simplicity: The interface will have a simple design	Checkout process has too many steps.	5	Combine checkout steps into a single page.
7	Predictability :The interface will behave in such a manner that the user can accurately predict what will happen next	Delivery tracking details are too vague.	4	Add a clear visual tracking timeline.
8	Accuracy: Interface will be free from errors	Search results sometimes show unrelated products.	5	Improve search filter relevance.
9	Technical Clarity: Interface will have the highest possible fidelity.		0	High-fidelity UI looks sharp.

10	Fulfillment : The interface will provide a satisfying user experience	Support options take time to find during delivery delays.	4	Add a quick "Help" shortcut on tracking screen.
11	Consistency: Interface will be consistent		0	Design is consistent overall.
12	User Support: Interface will provide additional assistance as needed or requested	Hard to reach customer care for order issues.	4	Place contact support button in order details.
13	Precision: The interface will allow the users to perform a task exactly		0	Works fine.
14	Forgiveness: Interface will make action recoverable		0	Standard back navigation works fine.
15	Responsiveness: The interface will inform users about the results of their actions and their interface status	Order status updates could be faster post-checkout.	3	Send automated SMS / push alerts for shipping milestones.
	Total Score		34/150

PART II : List out any other points that you may have missed out . (Other than Nielsen's Principles)

S.NO	OBSERVATIONS	COMMENTS
	Modernized homepage UI	Homepage redesign looks clean and well-structured.
	Search accuracy.	Search engine needs to filter out random items.
	Long checkout flow.	Reducing steps will make buying much faster.
